

FROM ONE SOURCE

6 technologies, 1 partner, all options

SELFCONTROL

Self-contained luminaire with integrated automated self-testing module

The simple solution for small projects.

Quick to install, immediately available and compliant with standards – ideal for applications with few luminaires and manageable effort.

WIRELESS BASIC

Wirelessly networked self-contained luminaires

The smart solution for many small locations.

Easy to install on site and centrally monitored via the cloud – ideal for chain stores, local authorities and operators with multiple properties.

WIRELESS PROFESSIONAL

Wirelessly monitored emergency lighting system

The powerful solution for demanding existing buildings.

Full functionality without complex cabling – even where classic systems reach their limits. Particularly suitable for renovations.

CC24

24-V-LOW-POWER-SYSTEM

The flexible solution for decentralised concepts.

Suitable for use in individual fire compartments, with reduced installation effort, less E30 cable material and cloud connection.

CENTRAL POWER SUPPLY SYSTEMS

The sustainable solution for large projects.

Central batteries with a long service life ensure reduced maintenance and a reliable supply, even over long distances and with high ceilings.

DALI

Intelligent emergency lighting

Centralised control of wired self-contained luminaires through networking.

With a DALI interface, self-contained luminaires can be centrally monitored and integrated into building automation systems. Connected to your own DALI control unit, this creates a powerful and high-performance solution.

WHY 6 TECHNOLOGIES?

Every project is different:

new construction or renovation, small property or large project, centralised or decentralised supply.

That is why the RP-Group combines **six different emergency lighting technologies under one roof**. This allows for maximum freedom in planning – without system constraints, but with clear responsibility.
