

Art.-Nr: MCT15 remote display remote display MCT15

The MCT-15 indicator panel is the smart extension for emergency lighting systems of the *multiControl* series. It provides a clear, decentralized display of all relevant system statuses – visually via LEDs and plain text display, and acoustically in case of faults.

It indicates mains or battery operation, system faults, and the status of maintained light circuits. Additionally, it allows remote triggering of function tests, switching between operating modes, and controlling maintained circuits – optionally via integrated key switch.

An intuitive internal menu enables flexible configuration for various applications. Available in surface- or flush-mounted versions (MCT-15(S)/MCT-15U(S)), the device integrates easily into RS485 BUS networks.

TECHNICAL DATA

Housing color	White
Protection type (IP)	IP20
Depth	116 mm
Width	24 mm
Height	116 mm
Weight	0.17 kg
Customs tariff number	85389091
Connection cross-section	0,4 - 0,8 mm ²
Input voltage DC	12 - 18 V
Protection type (IP)	IP20

As of: 14.08.2025 - Subject to technical changes and errors.
