Out of the danger zone – dynamic emergency exit control provides for groundbreaking safety

Rodgau, Germany, 18 March 2018. With its FlexWay series of escape route luminaires, RP-Technik GmbH offers a flexible solution for dynamic emergency exit control. The FlexWay luminaire is controlled by a sensor and able to display 10 different symbols. Thus, in case of an emergency, the escape route can be dynamically adapted to the prevailing circumstances and enable the evacuees to safely avoid potential hazards.

All versions of the robust FlexWay luminaires are available in white or anthracite metal housings and come with IP65 protection. The displayed pictogram is changed by the control information of the sensor, e. g. a fire alarm, and can display up to 10 different symbols.

In addition to the controllable version, the FlexWay luminaire is available as a traditional exit sign luminaire with static pictogram and as a ceiling-mounted safety luminaire. According to the manufacturer, the complete series of luminaires therefore provides a standardized, flexible and very safe escape route concept.
